

Remarks

The Examiner In paragraph 1 of the Official Action states the drawings must show the void portion and the electrical light source emitter. The void portion referred to in the claims is the channel 94 as seen in Figure 2. The electrical light source emitter is the string of rope lights 12 as seen in Figure 3. Appropriate amendments to the specification to obviate the objection have been made.

Claim 7 depending from claim 1 now recites that it is the reflective opaque glass backing member which is at least partially painted. Previously, claim 7 required only that at least one of the eroded transparent glass member, the eroded translucent glass member, or the reflective opaque glass backing member be at least partially painted. The patentability of claim 7 is argued in the concurrently filed appeal brief.

Respectfully submitted,
